

Remote server management that enables secure remote computer access using your standard IP network

The ADDERLink® ipeps enables you to remotely access and control your critical computing hardware using your standard IP network. KVM connections are VGA and PS/2. Using RealVNC® client software, computers outside the network can be remotely and securely accessed.

ADDERLink® ipeps

RealVNC Server with RFB 3.3 Support

Up to four users can remotely and securely access computers outside your network, with the possibility of creating 16 user profiles with defined access rights.

USB and Virtual Media Support

Engineered to act as a conduit through which data can be passed so that files can be transferred via IP onto the ipeps and onto the target computer by means of a USB virtual media port.

High Performance Video over VNC

RealVNC enables video resolutions of up to 1600x1200, as it is free of the limitations of HTTPS.

Independent Operation

Maintain full control even during boot up, BIOS level or computer crash states, it will work even if the controlled devices are not operational.
