| 1) Open the door, release the hinge bolts, and lift the door out of the frame.<br>2) Place the frame in the aperture, ensuring it's 7mm larger than the panel size. Mark the hinge and door retaining pin positions.<br>3) Remove the frame, drill clearance holes for the marked positions.<br>4) Fix the frame into the aperture by bending up the frame fixing tabs. Using all fixing holes, ensure it is square and flush with the ceiling / wall.<br>5) Refit the door by tightening up the hinge bolts back in position and closing the door.<br>6) Lock the door with the key, ensuring it is flush with the frame. |                                                                                                                                  |
| <b>Independent bracing or support may be needed for the Access Panels weight.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                  |

Before applying the plaster skim coat, apply joint filler and scrim tape over the junction between the beaded frame and plasterboard to prevent cracking.
